

SAS® Installation, Configuration, Validation

Strong Tower Solutions has performed hundreds of installations and configurations for various SAS and non SAS BI tools. This includes performing validated installs for our pharmaceutical clients as well. Our architects and engineers understand the complete technical stack from operating systems, to database, to SAS, and other technologies that may need installation and configuring.

Successful Installations require:

- *Understanding the overall analytic architecture and technology*
- *Deep knowledge of various operating systems (e.g Linux and Windows)*
- *The ability and experience to plan, communicate, and coordinate with multiple resources*
- *Experience with integrating multiple analytic technologies (including databases and platforms)*

Our capabilities to ensure your success:

1. Systems Integrator (working with SAS, our Clients and Hosting Providers)
2. SAS Partner - up to date on the latest technologies
3. Experienced SAS Engineers with install and configure validation expertise
4. Providing standardized and proven documentation (including Validated Documents)
5. Experience with various Operating Systems, SAS, and other Analytic Tools
 - a. Linux, Windows, and Mainframe
 - b. SAS Office Analytics and SAS Grid
 - c. Databases – Microsoft SQL Server, Oracle, Teradata, and Hadoop

Our Delivery Model

Startup

- High-level System Design Requirements
- Services, Hosting, Software Contract
- Planning and Kick-off Meeting

Phase 1

- Hosting/Software System Design Specification (SDS) Finalized
- Hardware and Networking Configured and Validated
- Pre-installation Preparation

Phase 2

- SAS Installation and Configuration
- User Connectivity and Testing
- System Documentation Delivered and Sign-off
